

## YOU AND YOUR SAFETY MATTERS TO US

December 3, 2020 (Enid, Oklahoma)

Since 2014 Acid Tank Leasing (ATL) has had an impeccable run in the Acid Tank Rental industry, with primary focus on the energy market segment. ATL began building our fleet of Acid Tanks with only Steel-lined Tanks in our fleet until year-end of 2018, at which time we introduced our very first PolyTank (as pictured above); yet, ATL still has not had a reportable spill.

***“Our every-day goal is to be the absolute best Acid Tank Rental Company in the entire USA, with your safety in mind.” -Terry Vaughn (CEO/VP of Operations, Acid Tank Leasing)***

While we have not had any reportable or recordable spills/incidents, we have experienced some near misses along the way, limited almost completely to our Steel-lined tanks (see bullet point #2, for reference to our only PolyTank-related near miss/issue). With every near miss that we have encountered and/or forecasted, which are very few considering the nature of our sole focus of business, we have learned from each of these instances and continually emphasize with a high degree of certainty that we learn and act with a mindset of prevention by way of action, comprised by a laser-sharp focus on customer and environmental safety. When any such situation is realized/discovered/or even imagined, we work to immediately complete fleet-wide inspections to look for any such/similar trends or instances that could potentially lead to even just a near miss, *as failure for us is just not an option!*

- **The primary thing that we have learned from the near misses in our Steel-lined Acid Tanks is that we limit the HCl Acid concentration to no higher concentration of 20% HCl (with a near 7-year track record).**
- **The only issue or concern we have experienced to date with our PolyTanks, is that a few Acid Deliveries have attempted to fill HCl through our Scrubber Tank, which has been addressed with additional signage and the production/circulation of *The ATL Tank Quick Start Guide* (with a complete 2- year track record-PolyTanks).**

With safety as our Top Priority, we must know our customers exact intentions & all potential additives for planned use, so that we can adequately check for any and all compatibility and longevity issues that might arise. For any jobs that intend to hold a concentration of HCl above 20% up to 36% HCl or exceed four (4) continuous months of use, we will only rent our PolyTank model, and with both our Steel-line Tanks and our PolyTanks in our arsenal, we stand more than ready to assist all your needs for your jobs related to HCl Storage.

Acid Tank Leasing is YOUR #1 Dependable Source for Acid Tanks, in the USA!
